WHY LIFT-ALL WEB SLINGS?

Lift-All web slings meet or exceed OSHA 1910.184, ASME B30.9 and WSTDA standards and regulations

All sling webbing contained in this catalog is recommended for general purpose lifting. Sling webbing has surface yarns connected from side to side, which not only protect the core yarns, but position surface and tensile yarns to work together to support the load. Wear or damage to sling webbing face yarns cause an immediate strength loss. Sling webbing has red core yarns to visually reveal damage which is one indicator for sling rejection. Please read warning sheet provided with each sling for additional details.

SLING WEBBING

(Side View)

- Transverse pick yarns inter-relate with binder/surface yarns.
- Woven surface yarns cover each side and carry a portion of the load.
- Strip of longitudinal core yarns bears majority of load.
- Binder yarns secure the surface yarns to web core yarns.
- Red core warning yarns.

TUFF-TAG™

OSHA requires all web slings to show rated capacities and type of material. The *Lift-All Tuff-Tag* is made from an abrasion resistant polymer that will remain legible far longer than any leather or vinyl tag. In fact, *Tuff-Tags* will consistently outlast the useful life of slings.

Now with Edge Radius.

SAFETY BULLETIN

A safety bulletin is packaged with every web sling from *Lift-All*. The bulletin includes:

- Inspection and removal from service criteria.
- Inspection frequency.
- Sling protection.
- Environmental considerations.
- Effect of angles.
- Exposure of slings to edges.
- Rigging configuration.

WARNING

Exposure of web slings to edges with a radius that is too small can cause sling failure and loss of load.

Edges do not need to be sharp to cause failure of the sling. The table shows the minimum allowable edge radii suitable for contact with unprotected webbing slings. Chamfering or cutting off edges of the load is not an acceptable substitute for fully rounding the edges to the minimum radius. Slings can also be damaged from contact with the edges or burrs at the sling connections.

Scan and learn more about edge radius and how to measure your load with *Lift-All's* RAD-MAN™ tool.

Minimum edge radius suitable for contact with unprotected web slings.		
Number of Sling Web Plies	Minimum Edge Radius (in.)	
1	0.18	3/16
2	0.50	1/2
3	0.75	3/4
4	1.00	1

For further information on minimum edge radii, contact *Lift-All*.

Measure the edge radius. The radius is equal to the distance between points A and B.

Approx. Thickness	Single-Ply Capacity Per Inch of Width	Material	Identifier	Applications*
0.156"	1600 lbs.	Polyester	Silver blue edge with Edge Damage Limit (EDL) markers and center stripe.	Light to heavy duty. 30% more resistant to edge damage than our <i>Tuff-Edge II</i> webbing.
0.156"	1600 lbs.	Polyester	Yellow with blue center stripe.	Moderate duty. Polyester stretches less for better load control and reduced abrasion.
0.156"	1600 lbs.	Nylon	Yellow with no center stripe.	Moderate duty. Nylon stretches more to help avoid shock loading.
0.125"	1200 lbs.	Polyester	Yellow with black edge marker and blue center stripe.	Light to moderate duty. Polyester stretches less for better load control, reduced abrasion.
0.125"	1200 lbs.	Nylon	Yellow with black edge marker and no center stripe.	Light to moderate duty. Nylon stretches more to help avoid shock loading.
0.3125"	2000 lbs.	Nylon	Yellow with two black center stripes.	Moderate to heavy duty. Abrasion resistant yarns cover surface.
0.1875"	1000 lbs.	Nylon	Yellow with one black center stripe.	Light to moderate duty. Abrasion resistant yarns cover entire surface.

* **WARNING** Always protect synthetic slings from being cut by corners and edges. See Sling Protection section in this catalog.

STANDARD WEB SLING TYPES

HARDWARE SLINGS

Unilink™ and *Web-Trap™* hardware can help to extend sling life by protecting the webbing from abrasion on rough crane hooks. Hardware can often be reused, lowering sling replacement costs.

Type U (UU) - Has the preferred and economical *Unilink* fitting with *Web-Trap* on each end for use in a vertical, choker or basket hitch. *Unilinks* allow choking from either end to save time and vary wear points.

Type 1 (TC) - Has a *Web-Trap* triangle on one end and choker on the other end. Typical use is in a choker hitch. Can also be used in vertical and basket hitches.

Type 2 (TT) - Has a *Web-Trap* triangle on each end. Normally used in a basket hitch, but can also be used in a vertical hitch. Cannot be used as a choker.

Type U

Type 1

Type 2

EYE / EYE

Type 3 (EE) - Flat Eye slings are very popular and can be used in all three types of hitches. They are easier to remove from beneath the load than sling Types 1, 2 and 4. Type 3 will be supplied as the standard EE sling, unless Type 4 is requested.

Type 4 (EE) - Twisted Eye slings are similar to Type 3 except the eyes are turned 90°. The eyes of a Type 4 nest easily on the crane hook. Reverse the eyes to allow more even wear in eyes.

Type 3

Type 4

ENDLESS

Type 5 (EN) - Endless slings are versatile and the most economically priced. They can be used in all three types of hitches. The sling can be rotated to minimize wear. The sling legs can be spread for improved load balance.

Type 5

REVERSE EYE

Type 6 (RE) - An endless sling with butted edges sewn together to double the sling width. They have reinforced eyes and wear pads on both sides of body and eyes for premium wear resistance.

Type 6

BRIDLES

Bridles - Bridle slings are useful when fixed lifting points are available. The standard web material for bridles is, *Tuff-Edge III*, which helps prevent sling damage and offers proven reliability. Available as single to quad-leg and wider widths up to 12".

Bridle

WIDE-LIFTS

Wide-Lift - *Lift-All* Wide-Lift slings support the load over a wide area to offer better balance - whether heavy or light. The wide bearing area reduces marring of soft load surfaces. Stiffeners at the base of the eyes deter the body webbing from folding down the middle.

WEB SLING EYE TREATMENTS

The eyes of web slings are often subjected to the harsh treatment of rough crane hooks. Specialty eye treatments are available to help reduce the wear in that area, thereby extending sling life. The following photos illustrate the more common eye treatments using wear-resistant webbing in various forms. Should you want eye treatment on your eye & eye web slings, please specify using the terminology below.

TYPE 3 – FLAT EYES

TYPE 4 – TWISTED EYES

General Information	Web Slings	Round Slings	Sling Protection	Wire Rope	Chain Slings	Rigging Hardware	Mesh Slings	Cargo Control	Lift-All Hoists	Hoist Rings	Plate Clamps	Lifting Devices	F		Standard Style	T	
													G		Lined Bearing Point	U	
													H		Fully Lined Eye	V	
													I		Wrapped Bearing Point	W	
													J		Fully Wrapped Eye	X	

Textured, wear-resistant material is standard for these eye treatments. Other pad materials are available in the Sling Protection section of this catalog.

Tapering Eyes - As a standard, the bearing points of the eyes on Type 3 and Type 4 slings 3" and wider are tapered to accommodate a crane hook. Untapered eyes are available upon request. Type 5 (endless) slings are NOT tapered unless specified on order. *Dura-Web™* 2000 slings are NOT tapered in any width.

Type 3 - Flat Eyes

Type 4 - Twisted Eyes

Type 5 - Endless (Showing Taper)

ENVIRONMENTAL CONSIDERATIONS

Exposure to sunlight and other environmental factors can result in accelerated deterioration of web slings. The rate of this deterioration varies with the level of exposure and with the thickness of the sling material.

Visible indication of such environmental deterioration can include the following:

- Fading of webbing color.
- Uneven or disoriented surface yarn of the webbing.
- Shortening of the sling length.
- Reduction in elasticity of the sling.
- Accelerated abrasive damage to the surface yarns of the sling.
- Breakage or damage to yarn fibers is often evident by a fuzzy appearance on the web.
- Stiffening of the web.

Anti-Abrasion Treatment

Lift-All webbing is treated for abrasion. Heavy duty treatments are available as a supplemental process for greater protection. Natural, untreated webbing is available upon request.

Elasticity

The stretch characteristics of web slings depends on the type of yarn and the web treatment. Approximate stretch at rated sling capacity:

NYLON		POLYESTER	
Treated	10%	Treated	7%
Natural	6%	Natural	3%

TOLERANCES FOR WEB SLINGS

Sling Type	Length Tolerance*
1-Ply	± (1.5" + 1.5% of sling length)
2-Ply	± (2.0" + 2% of sling length)
3-Ply & 4-Ply	± (3.0" + 3% of sling length)

* For web sling widths wider than 6", add 1/2" to these values. For tighter tolerance or matched set lengths, please consult with Customer Service prior to ordering.

Sunlight / UV Exposure Service Life

Nylon and polyester web slings possess a limited useful service life due to the degradation caused by exposure to sunlight or other measurable sources of UV radiation.

Lift-All web slings that are regularly exposed to UV radiation should be identified with the date they are placed into service and should be proof-tested to twice their rated capacity every six months.

Lift-All nylon and polyester web slings shall be permanently removed from service when the cumulative UV or outdoor exposure has reached these limits:

- 2 years: 1-Ply and 2-Ply web slings
- 3 years: 3-Ply and 4-Ply web slings

Temperature

Nylon and polyester slings degrade at temperatures above 200°F.

Chemical Environment Data

Many chemicals have an adverse effect on nylon and polyester. The chemical chart below is a general guide only. For specific temperature, concentration and time factors, please consult *Lift-All* prior to purchasing or use.

CHEMICAL	NYLON	POLYESTER

The patented design of our *Tuff-Edge III* translates to a softer web with increased abrasion and edge-cut resistance.

The Edge Damage Limit (EDL) out-of-service marker both simplifies the inspection process and also extends the life of the web slings, saving you money. Whenever sling damage is concentrated along the edge of the webbing, the sling may continue to remain in service until the damage has reached the EDL black line marker, assuming the sling is otherwise in good operating condition. If there is any question as to the serviceability to the sling, remove from service.

Features and Benefits

- Soft twill weave body.
- Improved handling characteristics with no coated edge yarns.
- Easy to identify by the blue tubular edges and EDL marker.
- Available in 1" to 12" widths.
- 30% more resistant to edge damage than our *Tuff-Edge II* webbing.
- Tubular edge design with damage-resistant core helps protect the body fibers from cutting, keeping the integrity of the sling intact without compromising its strength.
- Edge Damage Limit (EDL), out-of-service marker aids in sling inspection (refer to TEIII Web Sling Safety Bulletin).

WEB EDGE CUT PERFORMANCE CHART

Webbing Design	Edge Construction	Comparative Web Edge Cut Test Performance Rating	
		Poor	Superior
<i>Tuff-Edge III</i>	Tubular with Reinforced Core		
<i>Tuff-Edge II</i>	Polymer		
<i>Webmaster 1600 Poly</i>	Standard		

WEBMASTER® 1600 NYLON & POLYESTER SLINGS

The Traditional Standard for Heavy Duty Slings

Webmaster 1600 is our most popular web due to strength and service life. This versatile workhorse can be designed in many configurations for a wide variety of lifting applications. Many industries appreciate the value versus strength capabilities of this product line, making it the go-to solution.

Features and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process.
- *Tuff-Tag™* provides serial numbered identification for traceability.
- Proven reliability.

Saves Money

- Yellow treatment for abrasion resistance and extended sling life.
- *Tuff-Tag* provides required OSHA information for the life of the sling.

Saves Time

- Polyester web is identified by a single blue surface stripe.

POLYESTER - TYPE 3 FLAT EYES

NYLON - TYPE 4 TWISTED EYES

For details on characteristics of nylon versus polyester webbing, see 'Environmental Considerations' in this section.

Note: Type 5 (Endless) slings are not tapered unless specified.

Scan and learn more about Lift-All's Tuff-Edge III.

Tuflex® is an alternative...

For 3-ply and 4-ply slings wider than 6", Tuflex Roundslings should be seriously considered. Tuflex offers increased flexibility, ease of use and lower cost.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

*** To order aluminum hardware, single ply 2" - 6" only, add A after TC or TT.

Custom configurations available.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

WEBMASTER® 1200 SLINGS

Standard duty *Webmaster* 1200 is designed as an economical sling for less frequent use.

Features and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process.
- Proven reliability.
- *Tuff-Tag*™ provides serial numbered identification for traceability.

Saves Money

- Economical option for less frequent use.
- Yellow treatment for abrasion resistance and extended sling life.
- *Tuff-Tag* provides required OSHA information for the life of the sling.

Types
U, 1 & 2

Type 3
Flat (F)

Type 4
Twisted (T)

Type 5

Note: Types 3 and 4 slings are tapered at 3" and wider unless otherwise specified. Type 5 (Endless) slings are NOT tapered unless specified.

+ Unilink is the standard fitting for widths 2"-4" triangle and chokers available on special order.

**Replace the F with a T for Twisted Eyes.

*** ⚠ WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

UNILINK™ SLING HARDWARE

Unilink Web Sling Hardware

Unilinks are a forged, high carbon steel fitting that function as both a triangle and choker.

Features and Benefits

- Smooth rounded profile helps protect sling, worker, and load.
- Unilink has the same rated capacities as TT or TC slings.
- Functions both as a triangle and a choker, allowing you to choke from either end.
- Can be re-webbed to reduce cost.
- Powder-coated finish for longer life.
- Unilinks cost less than triangle/choker combinations.
- Large crane hook opening speeds rigging.
- Forged steel for strength and reliability.
- *Web-Trap™* feature keeps web aligned on hardware.

Unilink Hardware Specifications

Web Width (in.)	Dimensions (in.)				Weight (in.)	WLL (lbs.)
	L	D	H	T		
2	3.69	2.0	0.69	0.56	1.1	8,000
3	5.06	3.0	0.88	0.63	2.4	10,800
4	6.19	4.0	1.00	0.75	4.0	14,400

Avoid contact of hardware with load edges.

Forged Aluminum Triangles and Chokers

Aluminum is severely degraded by alkali, caustic environments, acids and salt water.

Aluminum triangles and chokers are available but may only be used with single-ply web slings within the rated capabilities shown in the table. They should not be used with *Dura-Web™* 2000 webbing.

Forged from aircraft aluminum, this tough alloy is stronger than mild steel. Aluminum has the advantages of being lightweight, non-sparking and does not rust.

Note: Aluminum triangles and chokers **DO NOT** offer the advantages of the *Web-Trap* feature. Aluminum fittings are not as durable and cost more than steel.

Forged Aluminum Triangles

Web-Trap™ Steel Sling Hardware - Triangles & Chokers

A significant improvement in triangle/choker design, *Web-Trap* fittings feature positive web capture to eliminate web slippage. These fittings are manufactured from alloy steel for lighter sling weight and a powder-coated finish to inhibit rust.

Web-Trap locks webbing to center of hardware.

REVERSE EYE SLINGS

The Reverse Eye Sling is engineered with reinforcing panels on both sides of the sling. It is the most rugged and versatile of all web slings. The sling incorporates premium wear-resistant material for protection on all surfaces.

The reverse eye sling is not just an endless sling with wear pads.

Features and Benefits

Promotes Safety

- Superior choke hitch grips load security.
- Reinforced eyes improve strength.
- The red core yarn warning system aids in the inspection process.
- *Tuff-Tag*™ provides serial numbered identification for traceability.

Saves Money

- An additional wear-resistant layer offers superior abrasion resistance.
- Reversible eyes reduce wear and increase sling life.
- Heavy-duty slings using *Tuff-Edge*® webbing are armored on all four sides resulting in the toughest web sling available.

Saves Time

- Eyes nest well on crane hook for easy rigging.
- Flat eye construction is available to facilitate removal from under loads.

Single ply endless with reinforced eyes

- A. Extended web length makes 2-ply eyes.
- B. Reinforcing web piece sewn-on to make 2-ply eyes.

Add wear pads to both sides of body and eyes

- C. Single ply endless sling with butted sides.
- D. Texturized wear pads on both sides of eyes.
- E. Texturized wear pads sewn on both sides of body.

Completed RE sling may be a 1, 2 or 3 ply endless sling with reinforcing webbing for each loop, and texturized wear pad on each side of eyes and sling body.

Reverse Eye Slings using *Webmaster* 1600 webbing are available by special order.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

DURA-WEB™ NYLON SLINGS

Best in Abrasion Resistance

Available in two strength classes, all *Dura-Web* slings feature premium abrasive resistant yarns covering all surfaces for extended sling life and long term value.

Features and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process.
- Striped webbing helps identify proper capacity.
- *Tuff-Tag*™ provides serial numbered identification for traceability.

Saves Money

- Abrasion resistant fibers cover both faces and edges for greater sling life.
- *Tuff-Tag* provides required OSHA information for the life of the sling.

Saves Time

- Easily identified by stripes.

DURA-WEB 1000

- One black stripe: 1,000 lbs. per inch of width.
- The only light-duty web sling with an abrasive resistant surface.
- Wider bearing surface per capacity, helps protect load surface.
- *Dura-Web* slings meet or exceed OSHA and ASME B30.9 requirements.
- Available in 1" and 2" widths.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

SYNTHETIC WEB BRIDLE SLINGS

Bridle Slings are useful when fixed lifting points are available.

Features and Benefits

Promotes Safety

- *Tuff-Edge*® III web material is standard; helps prevent sling damage.
- Better load control and balance by using fixed connection points and multiple legs.
- Standard oblong links and hooks are forged from alloy steel for strength and reliability.
- Red core yarn warning system aids in the inspection process.
- Use of hardware prevents cutting and abrasion of sling at bearing points.
- *Tuff-Tag*™ provides serial numbered identification for traceability.
- Proven reliability.
- Wide widths available up to 12".

Saves Time

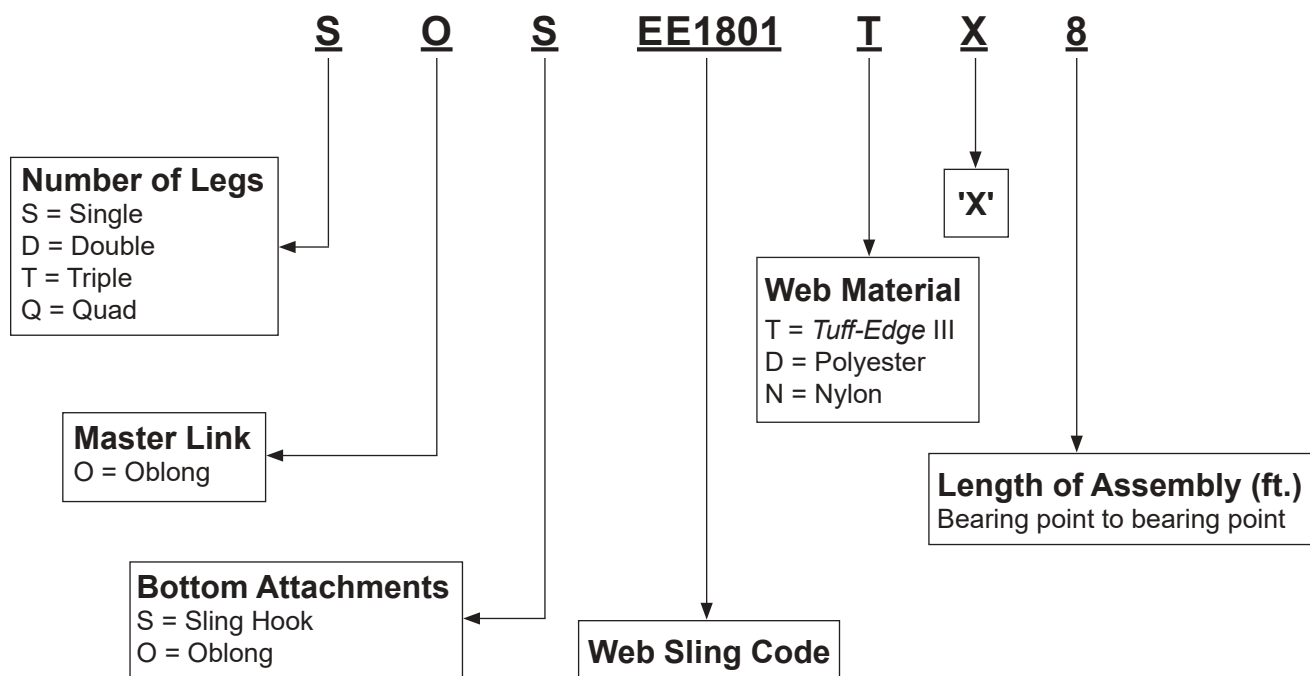

- Lighter weight and easier to use than chain or wire rope.
- Sling hooks quickly connect to loads having hoist rings or eye bolts.

Saves Money

- Soft web sling legs protect load.
- Endless configuration allows shifting of wear points.
- Edge Damage Limit (EDL), out-of-service marker aids in sling inspection (refer to TEIII Web Sling Safety Bulletin).
- Sling hooks and links can be re-webbed.
- *Tuff-Tag* provides required OSHA information for the life of the sling.
- Tapered eyes for better sling leg equalization, standard for 2" or wider.

Note: Hardware capacities correspond to the appropriate sling capacities. See hardware dimensions in Rigging Hardware section in this catalog. Import hooks with latches are standard. Contact *Lift-All* for domestic hook and latch options.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

WIDE-LIFT SLINGS

Lift-All Wide-Lift slings support the load over a wide area to offer better balance – whether heavy or light. The wide bearing area reduces marring of soft load surfaces. Stiffeners at the base of the eyes deter the body webbing from folding down the middle. Wide-Lift slings are for use in a basket hitch only. The standard web material is *Webmaster*® 1600 nylon; polyester is available upon request.

	Ply	Body Width (in.)	Part Number	Rated Capacity* Vertical Basket (lbs.)	Eye Length (in.)	Min. Sling Length (in.)

Features and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process.
- *Tuff-Tag*™ provides serial numbered identification for traceability.
- Improved load stabilization.
- Continuous eye wide-lifts are constructed from one endless sling with the two body lengths butted and joined side by side.

Saves Money

- Wide bearing area reduces marring of soft load surfaces.
- Yellow treatment for abrasion resistance and extended sling life.
- *Tuff-Tag* provides required OSHA information for the life of the sling.

CONTINUOUS EYE WIDE-LIFT

For Heavy Loads

ATTACHED EYE WIDE-LIFT

For Light Loads

Note:

1. Never use Wide-Lift slings in a choker hitch.
2. *Tuff-Edge*® III may be used for the attached eyes.
3. Custom slings with higher capacities are available.
4. *Tufflex*® slings can also be designed in a Wide-Lift configuration. See specialty roundslings section.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

INSPECTION CRITERIA FOR WEB SLINGS

The following photos illustrate some of the common damage that occurs to web slings, indicating that the sling should be taken out of service. For inspection frequency requirements, see the General Information section of this catalog and the safety bulletin provided with each sling.

Abrasive Wear

WHAT TO LOOK FOR

Areas of the sling that look and feel **fuzzy** indicate that the fibers have been broken due to contact and movement against a rough surface or internally due to dirt/gritty substances. Affected areas are usually stained.

TO PREVENT

Never drag slings along the ground or pull slings from under loads that are resting on the sling. Use wear pads between slings and rough surface loads. A custom sling life span and inspection criteria should be established to maintain suitability of sling condition.

SUGGESTED LIFT-ALL PRODUCT: Wear Pad

See the Sling Protection section in this catalog for more sling protection options.

Tuff-Edge® III: Edge Wear

WHAT TO LOOK FOR

Abrasion to the blue tubular edge showing the white core.

TO PREVENT

Avoid dragging slings on the ground. Guard slings against contact with abrasive surfaces.

SUGGESTED LIFT-ALL PRODUCT: Wear Pad

See the Sling Protection section in this catalog for more sling protection options.

Knots

WHAT TO LOOK FOR

Knots are rather obvious problems as shown below. Knots compromise the strength of slings by not allowing all fibers to contribute to the lift as designed. Knots may reduce sling strength by up to 50%.

TO PREVENT

Never tie knots in slings and never use slings that are knotted.

Broken / Worn Stitching

WHAT TO LOOK FOR

Loose or broken threads in the main stitch patterns. The stitch patterns in web slings have been designed to maximize web sling strength. If the stitching is not fully intact, the strength of the sling may be affected.

TO PREVENT

Never load slings in excess of their rated capacity. Never pull slings from beneath loads or tension slings when the stitch pattern is in contact with any load edges. Never connect a sling eye onto any attachment having a width or diameter exceeding 1/3 of the eye length.

Surface and Edge Cuts

WHAT TO LOOK FOR

Broken fibers of equal length indicate that the sling has been cut by an edge. **Red core warning yarns may or may not be visible and are not required to show before removing slings from service.** It is important to understand that all of the fibers in web slings contribute to the strength of that sling.

TO PREVENT

Always protect synthetic slings from being cut by corners and edges by using cut protection.

SUGGESTED LIFT-ALL PRODUCT: *Sling Shield™*

See the Sling Protection section in this catalog for more sling protection options.

ACCEPTABLE

REMOVE FROM SERVICE

WHAT TO LOOK FOR

Cuts to the blue tubular edge, not yet reaching the black EDL line, are examples of sling misuse. Remove web slings from service whenever cut damage along the web edge extends past the black EDL line. Note: All forms of cutting to the web show sling misuse.

TO PREVENT

Always protect synthetic slings from being cut by corners and edges.

SUGGESTED LIFT-ALL PRODUCT: *Sling Shield™*

See the Sling Protection section in this catalog for more sling protection options.

Tuff-Edge® III: Edge Cuts

Oversized Connection

WHAT TO LOOK FOR

Broken stitching at the base of the eye or cuts to the top of the eye. Cuts at the top of the eye are more prevalent when the sling is misused by draping it over sharp edges such as forks on a forklift.

TO PREVENT

For 1-ply and 2-ply web slings, never place a sling eye over a hook or other attachment whose diameter or thickness exceeds 1/3 of the eye length or 1/4 of the eye length for 3-ply and 4-ply slings.

SUGGESTED LIFT-ALL PRODUCT: *GripHook®*

Instead of using slings on the forks of a forklift, use *Lift-All's GripHook*. See the Sling Protection section in this catalog for more sling protection options.

INSPECTION CRITERIA FOR WEB SLINGS

General Information	Web Slings	Round Slings	Sling Protection	Wire Rope	Chain Slings	Rigging Hardware	Mesh Slings	Cargo Control	Lift-All Hoists	Hoist Rings	Plate Clamps	Lifting Devices
---------------------	------------	--------------	------------------	-----------	--------------	------------------	-------------	---------------	-----------------	-------------	--------------	-----------------

Heat / Chemical / Environmental

WHAT TO LOOK FOR

Melted, charred or discolored fibers anywhere along the sling. Heat, chemical and environmental damage can look similar and they have the effect of damaging sling fibers and compromising the sling's strength. Look for discoloration and/or fibers that have been fused together and often feel hard or crunchy.

TO PREVENT

Never use nylon or polyester slings where they can be exposed to temperatures in excess of 200°F. Never use nylon or polyester slings in or around chemicals without confirming that the sling material is compatible with the chemicals being used. To avoid UV damage review the outdoor exposure limits in the safety bulletin.

Illegible or Missing Tags

WHAT TO LOOK FOR

If you cannot find or read all of the information on a sling tag, OSHA requires that the sling shall be taken out of service.

TO PREVENT

Never set loads down on top of slings or pull slings from beneath loads if there is any resistance. Load edges should never contact sling tags during the lift. Avoid paint or chemical contact with tags.

Holes, Snags & Pulls

WHAT TO LOOK FOR

Punctures or areas where **fibers stand out** from the rest of the sling surface.

TO PREVENT

Avoid sling contact with protrusions, both during lifts and while transporting or storing.

SUGGESTED LIFT-ALL PRODUCT: Wear Pad

See the Sling Protection section in this catalog for more sling protection options.

Red Core Yarns are an **additional** aid to warn of dangerous sling damage. All standard *Lift-All* Web Slings have this warning feature. The red core yarns become exposed when the sling surface is cut or worn through the woven face yarns. When red yarns are visible, the sling should be removed from service immediately. For other inspection criteria see OSHA/Manufacturer regulations in the General Information section of this catalog and the safety bulletin provided with each sling.

Scan and learn more about synthetic sling inspection criteria.

HOSE HALTERS™

Help protect your workers from injury and your equipment from damage

When pipe or hose couplings fail under pressure, *Lift-All Hose Halters* minimize thrashing to reduce equipment damage and personal injury. Slide the rubber grommets to keep choked eyes snug on the hose. The standard lengths will accommodate pipes and hoses with inside diameters (ID) of 1/4" up to 6".

Available in Four Different Strengths Features and Benefits

- Suitable for pneumatic, water, hydraulic pipes and hoses.
- Made from strong, flexible nylon webbing.
- Easy to install.
- Simple design that will not rust compared to other similar products.
- Meets both OSHA and Canada OHS requirements for restraining devices on pipe and hose connections.

Hose Halter Selection and Use

When securing hoses and pipe connections, do not exceed the specified pressure ratings.

The length of *Hose Halters* are ordered as a flat length based on a value equal to 8 times the hose outside diameter (OD), plus the desired span or gap between the choke points and rounded up to standard sizes shown below.

Note: When measuring outside diameter (OD) accommodate for end fitting diameter. End fittings larger than hose/pipe OD select next larger size *Hose Halter*. Contact *Lift-All* for custom lengths.

Recommended for Use on the Following Pipe and Hose Inside Diameters											
Part Number	Length (in.)	Color	1/4"	1/2"	3/4"	1"	2"	3"	4"	6"	
			Hose Maximum Internal Pressure (PSI) at above hose ID								
HH122*	22"	O R A N G E	26,000	6,500	2,900	1,650	400	-	-	-	
HH130	30"							-	-	-	
HH140	40"							-	-	-	175
HH144	44"		-	-	-	-					
HH164	64"		-	-	-	-	-	-	50		
HH230*	30"		52,000	13,000	5,800	3,300	750	-	-	-	
HH244	44"		-	-	-			-	-	-	
HH264	64"		-	-	-			-	350	200	90
HH274	74"		-	-	-			-	-	-	
HH330*	30"	Y E L L O W	-	29,000	13,000	7,300	1,800	-	-	-	
HH344	44"		-	-	-			-	820	460	-
HH364	64"		-	-	-			-	-	-	200
HH430*	30"		-	37,000	16,000	9,400	2,300	-	-	-	
HH444	44"		-	-	-			-	1,040	580	-
HH464	64"		-	-	-			-	-	-	260

OSHA 1926.603(a)(10) states:

"Safety chains, or equivalent means, shall be provided for each hose connection to prevent the line from thrashing around in case the coupling becomes disconnected"

*Minimum Length. To order custom *Hose Halters* contact *Lift-All* with hose/pipe I.D., internal working pressure (PSI) and length.

Note: For use on hoses of 1/2" ID and smaller, HH2 2-ply *Hose Halter* restraints are recommended for improved flexibility near the end section of the restraint.

ROUNDONE™ HOSE HALTER

The Heavy Duty Solution for Coupling Safety

Help protect your workers from injury and your equipment from damage when pipe or hose couplings fail under pressure.

RoundOne pipe and *Hose Halters*™ offer protection for a wide range of pipe and hose sizes and pressures. Suitable for use on pneumatic, water, and hydraulic pipes and hoses. Available sizes cover inside diameters from 1/2" through 8", with pipe/hose pressures up to 85,100 psi. Complies with OSHA, Canada OHS and Work Safe BC requirements for restraining devices on pipe and hose connections.

C = Length between Choke Points

What size do you need?

1. In the chart below, find the row for your **pipe/hose inside diameter (ID)**.
2. Read across the row of selected ID until you come to a **maximum hose pressure** that exceeds the maximum pressure that will go through your pipe/hose.
3. The appropriate halter part number for that assembly is at the top of that column.

Part Number	HHS3	HHS6	HHS9	HHS12	HHS15	HHS18	HHS24	HHS28	HHS36
Minimum Length	20"	20"	24"	36"	36"	36"	36"	36"	44"
Pipe/Hose ID	MAXIMUM PIPE / HOSE PRESSURE (PSI)								
0.50"	23,500	47,900	76,000	-	-	-	-	-	-
0.75"	10,400	21,300	33,700	42,600	53,100	67,400	85,100	-	-
1"	5,800	11,900	19,000	23,900	29,800	37,900	47,800	57,400	70,100
1.5"	2,600	5,300	8,400	10,600	13,200	16,800	21,200	25,500	31,100
2"	1,470	2,900	4,700	5,900	7,400	9,400	11,900	14,300	17,500
3"	650	1,300	2,100	2,660	3,300	4,200	5,300	6,300	7,700
4"	360	740	1,180	1,490	1,860	2,370	2,900	3,500	4,300
5"	230	470	760	950	1,190	1,510	1,910	2,200	2,800
6"	160	330	520	660	820	1,050	1,320	1,500	1,940
8"	90	180	290	370	460	590	740	800	1,090
Length Adder	0.3	0.6	0.9	1.2	1.5	1.8	2.4	2.8	3.6

What length do you need? Order halters by the flat length.

1. To determine the minimum length, add the outside hose diameter (OD) to the length adder (per chart), then multiply by 7 and add the minimum desired length between the choke points (C).
2. Round up to the next even 6" increment (42", 48", 54", 60", etc.).
3. Example: Your 1" ID hose carries 30,000 psi. Using the chart above, the first *Hose Halter* to exceed that rating is an HHS18. The OD of your hose is 1.5", and you want 16" between choke points. The calculation follows:

$(1.5 + 1.8) \times 7 + 16 = 39.1"$ (rounded up to 42"). The complete part number is **HHS18X42IN**.

$$\text{Minimum Length} = (\text{Hose OD} + \text{Length Adder}) \times 7 + C$$

Lift-All's patented *GripHook* design converts your forklift into a below the fork lifting device in a matter of seconds. These should be obtained for every forklift to avoid the unsafe/disallowed practice of hanging loose slings over forks. The *GripHook* replaces older style, heavy metal attachments.

The self-gripping design allows the *GripHook* to tighten around the fork when a load is applied. The easy to attach *GripHook* does not require any tools to install.

This economical solution is made from high quality synthetic materials saving you money, without compromising lift capacity.

Features and Benefits

- The *GripHook* is a lightweight alternative to metal attachments.
- Quick to install, remove and store.
- Self-gripping to the fork so there is no need to tighten attachment to the fork, saving you time.
- Turns your forklift into a hoist in a matter of seconds.
- Allows forklift to lift from the bottom of the forks.
- Quick and easy load control.
- The *GripHook* is designed with patented built-in cut protection technology.
- Sewn in the United States.
- 1-Ton and 2-Ton options available.
- A lightweight device with a multitude of uses.
- Order with optional lanyard - **Part Number: 60111**

**Shown With Optional Lanyard

FORK SLEEVES

Lift-All fork sleeves protect your loads from damage caused by the sharp edges of forklift forks. These long-lasting, easy to install sleeves are made from heavy-duty *Webmaster*® 1600 polyester webbing.

Features and Benefits

- Soft *Webmaster* 1600 polyester sling webbing cushions the load to avoid damage.
- 12" long rear flap protects the load from vertical member of the fork to avoid damage.
- Retaining straps keep sleeve on forks, saving time.
- Quick and easy to install.
- Sewn-in reinforced tip is available to prolong life of the sleeve, saving you money.

BUCKET & COOLER SLINGS

Improve productivity and help protect your workers from injury with these slings.

Lift-All Cooler Slings will adjust to lift 3, 5, or 10-gallon water coolers safely and securely to elevated workstations. Connect two or three together to save crane time.

- Made from 2" wide yellow polyester sling webbing. **Rated Capacity: 500 lbs.**
- Three lifting legs hold both cooler and lid securely.
- Buckles on the two belly bands allow for easy rigging, a snug fit and quick connection.
- Extra loop on the bottom of the sling allows for easy attachment of additional hook top cooler slings.
- Overall sling height is 44".

- Custom sizes available.

Hook Top Part Number: CSH10 weight: 4.3 lbs.
Eye Top Part Number: CSE10 weight: 3.3 lbs.

Lift-All Bucket Slings are designed to lift 5-gallon buckets filled with up to 200 pounds of material.

- Made from 1" wide yellow polyester sling webbing.
- **Rated capacity: 200 lbs.**
- Designed for buckets with an 11" diameter base.
- Two belly bands keep bucket secure.
- Overall sling height is 28".

- Custom sizes available.

Part Number: BS5 weight: 0.8 lbs.

DRUM HANDLING SLINGS

Lift-All drum handling slings provide an easy, inexpensive way to handle steel drums. Available in two styles to suit your needs for handling drums in the vertical or horizontal position.

- Tilt suspended drums to pour from open top or spigot.
- For use with ribbed steel drums, the ratcheting belly band tightens securely below the first rib.
- A wear pad is sewn on the inside of the lifting strap to prevent damage.
- Ratchet tightens and locks securely.
- The free end of the ratchet strap is sewn to stay properly threaded.
- Vertical legs are sewn to an adjustable belly band to maintain proper position.
- Easily lift standing drums for transport.

Vertical Drum Handling Slings

	Part Number	Web Width (in.)	Drum Diameter (in.)	Sling Capacity (lbs.)
Heavy Duty	DSV602DX24IN	2	24	850
	DSV602DX30IN	2	30	850
	DSV602DX36IN	2	36	850
Light Duty	DSV601DX24IN	1	24	300

Standard 55-gallon drum is 24" diameter. Other sizes available.

Note: Heavy duty is the standard option.

Horizontal Drum Handling Slings

Ideal for quick and easy lifting of steel drums in the horizontal position.

Part number **DSH601D** uses 1" polyester sling webbing and is rated for 1,500 lbs.

- Strong 1" polyester webbing pulls drum hooks securely into rims at both ends of the drum during the lift.
- One sling fits multiple-size drums.
- Easy to hook up and disconnect.
- Uses a 1/2" diameter oblong link at the top for easy connection to hook.

Note: If used in a chemical environment, contact Lift-All for sling material options.

Part Number: DSH601D

TRASH BARREL SLINGS

Improve productivity and help protect your workers from injury with these slings.

Lift-All Trash Barrel Slings are designed to lift 32-gallon plastic trash barrels. Use your overhead crane to make easy work of moving these heavy barrels.

- Made from 2" wide yellow polyester sling webbing.
Rated capacity: 1,000 lbs.
- Tapered and wrapped eyes allow for easy connection.
- Overall sling height is 51".
- Secure trash barrel to the sling through both handles using the individual sling legs.
- Custom sizes available.

Part No. TBS32
Weight: 3 lbs.

GAS BOTTLE WEB CRADLES

GBS1N

These specialty web cradles allow easy and secure lifting of your gas bottle cylinders into position. Two standard versions are available.

GBS1N automatically adjusts to accommodate 9" Dia. X 50" H to 13" Dia. X 39" H bottles. **GBS2N** is designed for the convenient tandem lifting of one oxygen and one acetylene bottle as used in most welding operations.

- Leather reinforced eyes for extended life.
- Each assembly is rated to lift 1,000 lbs.
- Top assembly collar fits around standard valve caps to secure top of cylinder.
- Square rings connect bottom and top assemblies and allow for automatic adjustment.
- Six legs on bottom assembly surround and secure base of cylinder.
- Abrasion resistant webbing lines both sides of legs at bottom for longer life.
- 2-ply leather base provides additional protection from abrasion and cutting.

The **GBS2N** has the same construction features as the **GBS1N**, but is designed specifically to lift one each of the standard size oxygen and acetylene bottles commonly used in welding operations.

GBS2N

STONE HANDLING SLINGS

Special abrasion resistant 4-inch wide nylon webbing for handling stone, concrete and building panels. *Lift-All* stone handling slings feature a soft abrasion-resistant wear pad woven onto the load side of the webbing, providing outstanding protection for both the sling and the polished stone surfaces.

Features and Benefits

Promotes Safety

- Red core yarn warning system aids in the inspection process.
- *Tuff-Tag*™ provides serial numbered identification for traceability and required OSHA information for the life of the sling.

Saves Money

- Heavy, soft yarns on load side to help protect the sling from abrasion.
- White pile yarns prevent color transfer to load.

Saves Time

- 2-ply version with abrasion resistance on both sides.
- Does not require orientation by the rigger.

Ply	Part Number	Rated Capacity* (lbs.)		
		Vertical	Choker	Basket
One Ply	UU1SH4N	5,400	4,000	10,800
	EE1SH4N	5,400	4,000	10,800
	EN1SH4N	10,800	8,600	21,600
Two Ply	UU2SH4N	9,400	7,000	18,800
	EE2SH4N	9,400	7,000	18,800
	EN2SH4N	10,800	8,600	21,600

Note: Eye/Eye style slings with flat eyes only. Untapered and 12" eye length.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

LIFT-ALL HULL SAVER™ BOAT SLINGS

Polyester** web slings designed especially for use with travel lifts to lower and retrieve large boats.

Features and Benefits

- 2-ply *Hull Savers* are the standard for improved durability and UV resistance.
- *Tuff-Tag™* provides required OSHA information for the life of the sling in a marine environment.
- *Lift-All* trained professionals are available for recommended seasonal inspection.
- Optional keel pad lead weights accelerate sinking to required lift depth.
- Extra eye offers versatility.
- Low-stretch polyester webbing helps to avoid scuff damage to hulls.
- Optional chine & keel pads protect boat and increase sling life.
- Edge guard wear resistant material available to protect sling from abrasion.
- Quick disconnect pins are available to improve productivity.

See Custom Engineered Devices in the back of this catalog for ordering options.

Ply	Hull Saver Part Number	Width (in.)	1Rated Capacity* (lbs.)	Optional Pull Pin Shackles			
				Shackle Part Number	Weight (lbs.)	Width (W) (in.)	Length (L) (in.)
Two Ply	HS2804	4	23,000	4WSH	3.2	4	3.75
	HS2806	6	32,600	6WSH	6.8	6	4.75
	HS2808	8	38,400	6WSHHD	9.8		
	HS2810	10	44,800				
	HS2812 ²	12	48,000/53,800 ²				

¹ Rated capacity is the rating of one sling in a vertical basket hitch.

² De-rate sling to 48,000 when used with 6" HD Shackle (6WSHHD).

** Nylon webbing is available, but stretches about 50% more than polyester and should not be used near acids. Polyester should not be used near caustics.

Safe Operating Practices

- Inspect slings prior to each use and do not use if damaged.
- Never allow people aboard the boat while it is suspended by slings.
- Never work under or near a boat suspended by slings.
- Boats must be properly blocked and stabilized before removing slings.
- *Hull Saver* boat slings are capacity rated for vertical basket lifts. Do not exceed rated capacities.
- When lifting with extra eyes, direction of pull must be away from center point of the original sling length.

Environmental Considerations

- Nylon and polyester degrade at temperatures above 200°F.
- Prolonged exposure to ultraviolet light adversely affects nylon and polyester. Slings become bleached and stiff when exposed to sunlight or arc welding.
- Many acids, alkalis and chemicals have an adverse effect on nylon and polyester. See Chemical Environment Data chart in Web section of this catalog.
- Remove from service if end fittings are corroded, distorted, cracked, broken or excessively pitted.

* **WARNING** Do not exceed rated capacities. Sling tension increases as the angle from horizontal decreases. Slings should not be used at angles of less than 30°. Refer to the Effect of Angle chart in the General Information section of this catalog. **Always protect synthetic slings from being cut by corners and edges. See the Sling Protection section in this catalog.**

HYDRANT SLING

This synthetic sling is used to grasp fire hydrants in a safe and secure manner. The self-choking feature offers additional security and safety. It fits over any size discharge outlet or side valve system and is designed to lift under the valve body, not the valve stem.

Features and Benefits

- Perfect for safe handling of fire hydrants.
- Lightweight and available in two lengths; 4'-6" and 7'-6".
- Easy to store.
- Will not rust and protects the hydrant finish while lifting.
- 4,000-lb capacity.
- Part Number's **HEN60** and **HEN6076**.

GLASS HANDLING SLING

Features and Benefits

- Select from a variety of materials to protect glass from marring and protect the sling from sharp edges.
- Made in various sizes to fit your specific glass lifting application.
- Sold in pairs.

See Custom Engineered Devices in the back of this catalog for ordering options.

Ply	Width (in.)	Vertical Endless Rated Capacity (lbs.)
One Ply	2	6,400
	3	8,800
	4	11,500
Two Ply	2	12,400
	3	16,300
	4	20,700

RFID TAGGING

Lift-All offers a high-frequency passive RFID tagging service for new slings.

RFID chips allow end users with RFID readers to electronically track a sling's history to assist with the maintenance, inspection, traceability, and compliance of their slings.

SYNTHETIC SLINGS

Synthetic slings will have a 5/8" diameter (plastic-coated) high-frequency chip inserted underneath the standard *Tuff-Tag*™. The sling will be labeled as containing an RFID chip.

Plastic Coated RFID Chip
Part # RFIDW

WIRE ROPE & CHAIN SLINGS

Wire rope and chain slings are offered with a high-frequency RFID chip, permanently set into a machined teardrop shaped piece of steel, and attached to the sling with a wire cable.

Wire rope sling placement is between the *Tuff-Tag* and the swaged sleeve. Chain sling attachment is beside the ID tag on the connector link.

Steel Encased RFID Chip
Part # RFIDS

Tag Information

RF Protocol: ISO15693 / ISO10443
Operating Frequency: HF - 13.56 MHz
IC Type: SLI Icode 1024 Bit
Memory Config.: 64 UID Bits (16 digits)
Functionality: Read and Write

Security: 64 Bit Kill Access Password
Read Range: Less than 1.0"
Quality Guarantee: 100%
IP Classification: 68

GANTRY SLING RACK

A great addition to any manufacturing or industrial facility.

Part Number	Description	Weight (lbs.)
SLR-UM-6	Universal Sling Rack	164
SLR-LS	Optional Locking System	24
SLR-HK	Additional Hooks (ea.)	7.94

- Strong steel construction.
- Blue powder-coated toughness.
- Eight double hooks are standard.
- Adjustable double hooks - max capacity 150-lbs.
- Comes with adjustable feet, casters and anchor bolt kit.
- Optional: extra hooks and hook lock.

Optional Locking System

Anchor Bolt Kit

Capacity:
2,000 lbs.

Adjustable Feet

Capacity:
2,000 lbs.

Casters

Capacity:
1,200 lbs.
